AMENDMENTS TO THE SPECIFICATION:

Please amend the specification by replacing the paragraph extending from line 15 to line 22 of page 6, with the following amended paragraph:

For using the device, the device is <u>assembled</u> assemble as shown in Fig. 2 and Fig. 3, placing membrane 8 between the frame-means <u>7 and 9</u> <u>7 & 8</u>. The reservoirs are positioned in the reservoir-rack and liquid samples are introduced into the reservoir. Loading samples into the reservoir may be performed by placing reservoir-rack on a separate platform, after loading the samples, the reservoir-rack containing reservoir and samples may be assembled with the main device, Fig.3. As the device is <u>assembled</u> assemble, the capillary opening of the reservoirs rest and contact the membrane below. The top plate 11 may also be <u>positioned position</u> on top of the reservoir-rack to firmly secured the reservoir on top of the membrane and also cover the sample and the reservoir-rack.
